How To Import XML

How To Get API Info

Import urllib2

How To Import JSON

import json

xml import using minidom

from xml.dom import minidom

Loading in a url

url = 'http://xml.urlyour using/?q='

Parsing XML

```
class TypeModel(object):
    def __init__(self, var):
        self.__url = 'http://xml.urlinfo/?q='
        self.__request = urllib2.Request(self.__url + var)
        self.__opener = urllib2.buildopener()
    def send(self):
        self.__result = self.__opener.open(self.__request)
        self.sort()
    def sort(self):
        self.__xmldoc = minidom.parse(self.__result)
```

Parsing JSON

```
class TypeModel(object):
    def __init__(self, var):
        self.__url = 'http://xml.urlinfo/?q='
        self.__request = urllib2.Request(self.__url + var)
        self.__opener = urllib2.buildopener()
    def send(self):
        self.__result = self.__opener.open(self.__request)
        self.sort()
    def sort(self):
        self.__json_data = json.load(self.__result)
```
